

# MultiRIP

## Heat Transfer Inks & Transfer Paper Profiled in MultiRIP Hybrid Software

Yes, the full version of MultiRIP will allow you to get good, dense film output for screen printing film positives. You simply print separations and spot colors, with your own angles and frequencies, as grayscale, from your application and you'll get the dense film positives you need.

MultiRIP has built-in density curves for the following different screen printing film positives:

- Mitsubishi Film
- Lawson Waterproof Film
- Lawson Non-Waterproof Film
- PosJet Film
- AccuArt 3
- Victory Factory Film
- Zeta11 Film
- Ulano Film

NOTE: The MultiRIP Lite version does not support the film positive printing. Please check with your distributor about which version of the software you purchased. The Full version of the software has the following design in the top of the Interface:

If you see the word "Lite" written at the end of the graphic, then you have the Lite version of the software installed on your computer.
