

# MultiRIP Film

## How to Remove the PowerRIP Watermark from MultiRIP Film? (Validate the Software)

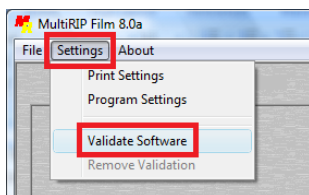

MultiRIP Film™ can be downloaded and tested without having to purchase a license (i.e. 16-digit Product Code). The software will print a watermark across the page during the evaluation period. To remove this watermark, you will need a 16-digit Product Code that matches the format (i.e. Medium Format for 17" wide printers and below; Large Format for 24" wide printers and above) of the software you installed. To get a 16-digit Product Code, you will need to contact an authorized distributor of MultiRIP Film™. [Click here](#) to view a list of authorized distributors of MultiRIP Film™.

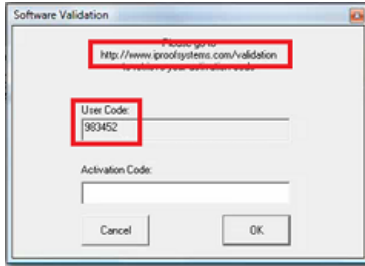

MultiRIP Film™ uses an online, security key activation system that will allow the user to remove the watermark. Each time MultiRIP Film™ is installed on a computer, a hidden validation folder is created. The hidden validation folder contains a unique 6-digit User ID code. This User ID code will change from one computer to another; or it will change after reformatting your hard drive. You will need both the 16-digit Product Code, the 6-digit User ID code and internet access in order to remove the watermark (i.e. validate the RIP).

### Validate the Software (Remove the Watermark)

Step #1: Open the MultiRIP Film™ Interface window (Start menu → All Programs → MultiRIP Film™ folder → MultiRIP Film™ application). Click on the Configure menu and choose Validate Software.

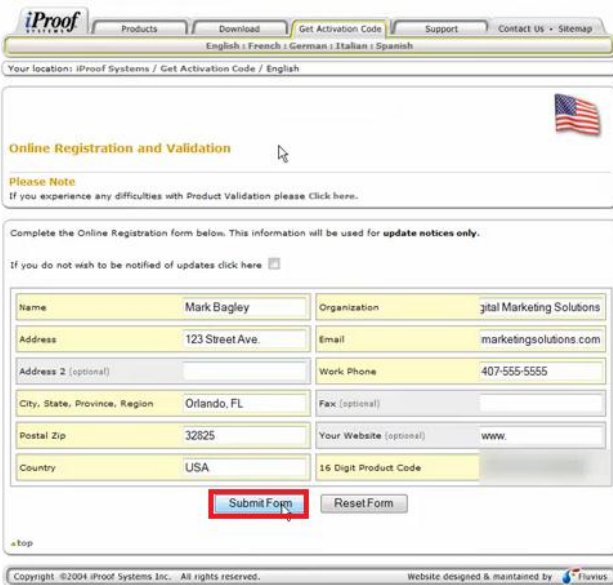

Step #2. The Validation window will open up and will display the User ID Code. Write the 6-digit User ID code and the website address listed in this window.

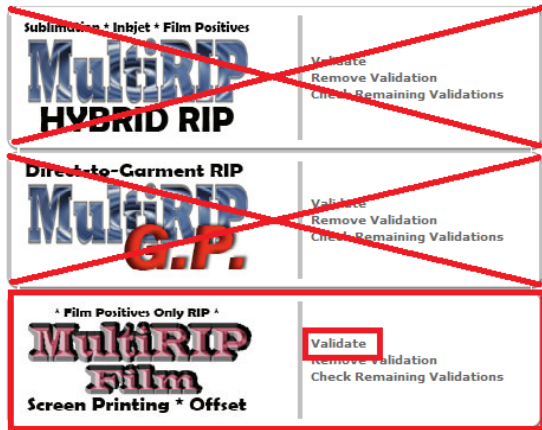

Step #3: Open an Internet browser window and type in the website address. Choose the language you want to use going forward.

Step #4: Complete the form with your company's information and your 16-digit Product Code.

Step #6: Scroll through the list of products and find the MultiRIP logo. Click the “Validate” link to the right of the MultiRIP Film™ logo.

NOTE: Make sure you select the Validate link next to the MultiRIP Film™ logo and not one of the other MultiRIP software programs.

Step #7: Type in your 16-digit Product Code and your 6-digit User ID code. Click the submit button.

To validate please follow these 3 steps.

1. From the PowerRIP program click on **Configure** then click on **Validate** - At this point, you will be presented with a User Code and prompted for an Activation Code. To get the Activation Code do step 2.
2. Enter your **Product Code** enclosed in your software and **User Code** from the PowerRIP program into the fields below, You will be presented with an **Activation Code**.
3. This Activation Code should then be entered into the Activation Code field of the PowerRIP program.

**ALL codes are CASE sensitive.**

Please enter your Product Code:

Please enter your User Code:

*Do not click "submit" more than one time.*

Step #8: Your 9-digit Activation Code will be displayed. Write the Activation Code down. Notice the website will display

Product Code -

User Code - 983452

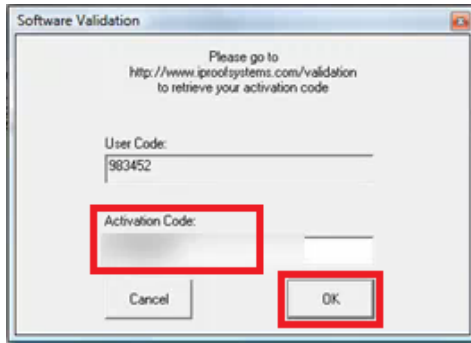

Removal Code - Not Available

Activation Code -

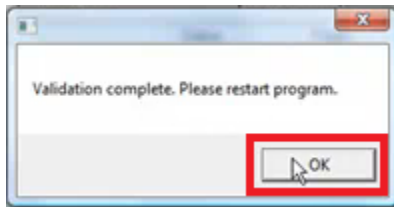

Maximum number of installations allowed - 3

Remaining number of installations left- 2

Step #9: Type in the 9-digit Activation Code into field in the Validate Software window. Click OK button.

Step #10: A message will show up stating the software has been validated. You will need to close the MultiRIP Film™ Interface window before the watermark is removed.

## Protect Your Activation Codes

Each user can receive up to three Activation Codes with each 16-digit Product Code. Think of your Product Code like a bank account where your Activation codes are stored. We provide three Activation Codes because we understand sometimes things happen to computers (i.e. hard drive crashes, electrical problems, computer is stolen,...). MultiRIP Film™ allows the user the ability to remove the validation from the last computer validated and put the Activation Code back into account associated with the 16-digit Product Code.

## Remove Validation Process

**NOTE:** The removal process will only work if the computer you are trying to remove the validation from was the last computer you validated. The only validation software program will only remember the last validation you did. Trying to remove the validation from a computer that you have subsequently validated another computer will result in the following error message:

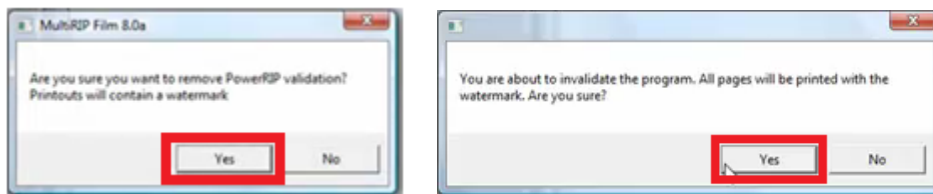

Before you can begin the removal process, you must still have the software on your computer and accessible. If you have already removed the software from your computer, you will need to reinstall the software.

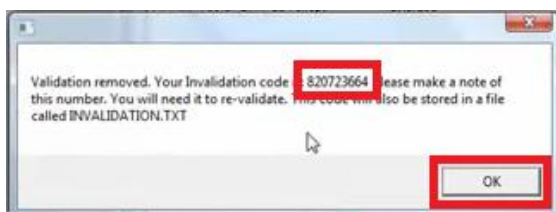

Step #1: Open the MultiRIP Film™ Interface window. Click on the Configure Menu and go select the Remove Validation option.

Step #2: You will get a series of warning messages verifying you want to remove the validation from the computer. This is done to prevent people from accidentally clicking on the link. You must agree to these messages to continue.

Step #3: You will then get a window that will provide you with your 9-digit Invalidation Code that you will need to write down. If you fail to write this down, the Invalidation Code can also be found in the document INVALIDATION.txt in the MultiRIP Film™ folder located on your C:\Drive.

Step #4: You will then need to go to the website address where you validate the software. If you don't remember the website address, you can get it by clicking on the Configure Menu and selecting the Validate Software option. The website address will show up in the Validate Software window.

Step #5: Choose the language you want to use going forward.

Step #6: Complete the form with your company's information and your 16-digit Product Code.

**Online Registration and Validation**

**Please Note**  
If you experience any difficulties with Product Validation please Click here.

Complete the Online Registration form below. This information will be used for **update notices only**.

Step #7: Scroll through the list of products and find the MultiRIP Film™ logo. Click the “Remove Validation” link to the right of the MultiRIP Film™ logo.

NOTE: Make sure you select the Remove Validation link next to the MultiRIP Film™ logo and not one of the other MultiRIP software programs.

Step #7: Type in your 16-digit Product Code and your 9-digit Invalidation Code. Click the submit button.

To remove validation, please follow these steps:

1. From the program click on File then click on Remove Validation.
2. After confirming your selection, you will be presented with a Remove Code, the validation will be removed from your hard disk.

By entering your Product Code and Remove Code below, you will increment the validation count for your Product Code allowing you to validate the program again later.

**ALL codes are CASE sensitive.**

Please enter your Product Code:

Please enter your Remove Code:

Step #8: The website will display a message showing your account was credited back one Validation Code. It will also list how many remaining validations are left for that 16-digit Product Code.

Product Code -

User Code - Not Available

Removal Code - 820723664

Activation Code - Not Available

Maximum number of installations allowed - 3

Remaining number of installations left -

### **Additional Activation Codes:**

If a user has used all the Activation Codes associated with their 16-digit Product Code, additional Activation Codes can be purchased. Email orders @ multiRIP.com (remove spaces) with the following information:

Company Name:

Contact Name:

Product Code:

A representative will contact you back with pricing information as soon as possible.
