

MultiRIP

What Sublimation Inks are Profiled for MultiRIP

MultiRIP has profiles for both ArTainium UV+ and SubliJet IQ sublimation inks from Sawgrass Systems. Sawgrass Systems own the patents on printing sublimation inks through a piezo printhead. At this time, MultiRIP will respect these patents and will not profile sublimation inks that will infringe on these patents.

NOTE: During the installation process of MultiRIP, you will be asked to choose between ArTainium and SubliJet IQ inks. When you select your type of sublimation ink, the software will install the profiles specifically made for that set of inks. There are different profiles for SubliJet IQ and ArTainium inks.
