

# MultiRIP

## **Sublimation Media Types Profiled in MultiRIP**

MultiRIP has profiles for the following different types of sublimation-ready substrates:

- Polyester Photo (for digital photographs with skins tones)
- Polyester Graphics (for clipart and similar like files)
- White Metal (also can be used for FRP plastic)
- White Tile
- Glass Cutting Board
- Mouse Pads

As new products come available in the sublimation market, we will continue to grow this list of profiles. If you have a substrate that you would like to have profiled, please send an email to [support@multirip.com](mailto:support@multirip.com). Please understand that it takes a considerable amount of time and product to create a professional quality profile.
